

Program for Create Hello World Function

```
// Define the createHelloWorld function
function createHelloWorld(args) {
    return "Hello World";
}

// Call createHelloWorld with various arguments
const result1 = createHelloWorld();
const result2 = createHelloWorld(42);

// Print the results
console.log(result1); // "Hello World"
console.log(result2); // "Hello World"
```

OUTPUT

Hello World

Hello World

Program for Allow One Function Call

```
var once=function (fn) {  
  let called = false;  
  return function(args,args1,args2){  
    if(!called){  
      called=true;  
      return fn(args,args1,args2);  
    }  
    else{  
      console.log("Function has already been called once.");  
    }  
  };  
}
```

```
let fn = (a, b, c) => (a + b + c);  
let onceFn = once(fn);  
console.log(onceFn(1, 2, 3));  
console.log(onceFn(5, 4, 3));
```

OUTPUT

6

Function has already been called once.

undefined
